LOG LOOKING

Under a rock or a log I found:

Do this activity with an adult that you live with. Select a location where you can be a safe distance away from other people while outside.

Directions:

1. Look around your yard, a neighborhood park, or a nearby section of woods for a log or a rock or even an old board on the ground.

2. Carefully roll over the log or lift up the rock.

3. Look closely to see if you find any critters living underneath. Some may be very small, you may have to get your nose down pretty close to the ground.

4. Make a quick sketch in the boxes above of each critter that you find.

5. When you are done, carefully replace the log or rock back to its original location. If you picked up any critters, return them next to the log or rock after you have replaced it so that you don’t squish them.
