

MY SOUND MAP

ME

Directions:

1. Find a spot where you can sit safely for at least five minutes. It can be outside or in your home near a window.
2. Be still and listen.
3. Draw a quick picture on the sound map for every sound that you hear. Locate the picture on the map so that it shows the direction the sound came from in relation to you. (If the sound was on your right, draw the picture on the right side of the word “me” on the map.)
4. Make another sound map from the same spot at a different time of day. Compare it to this one to see if the sounds change.
